# Story Board Design (hand drawn)

Date :

## Aim :

Analysing and drawing the story board design for our chosen project .

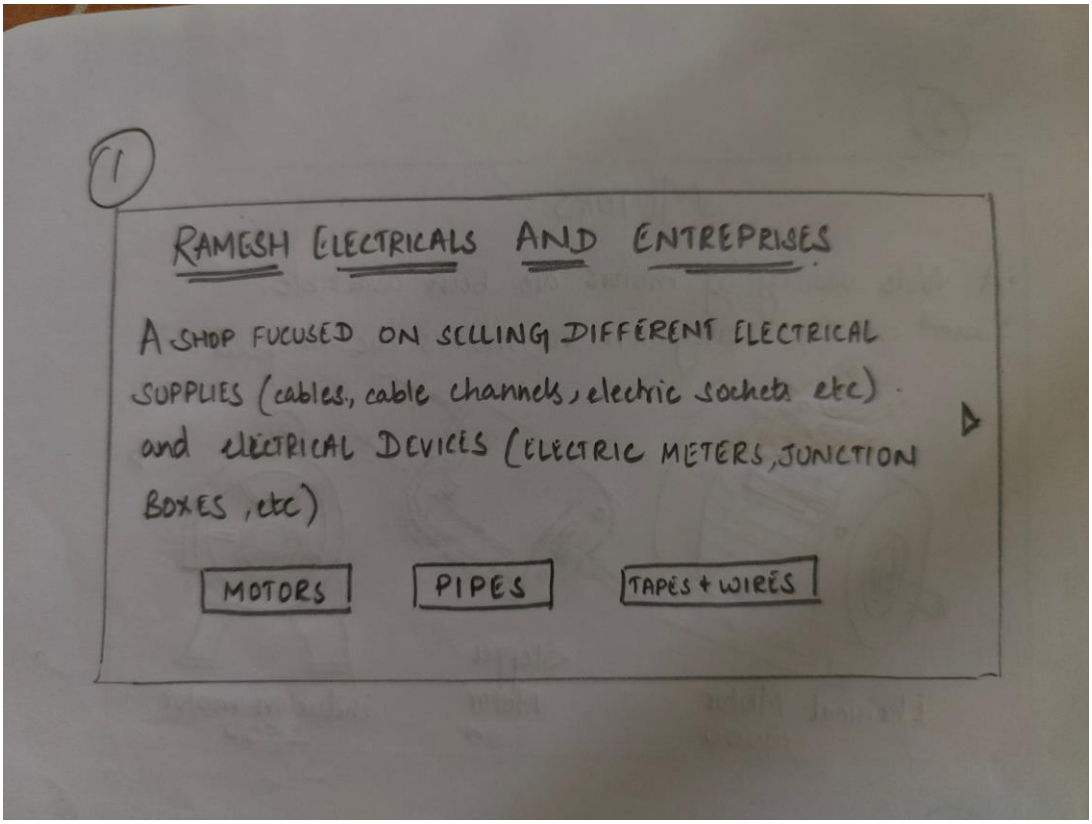
## Description :

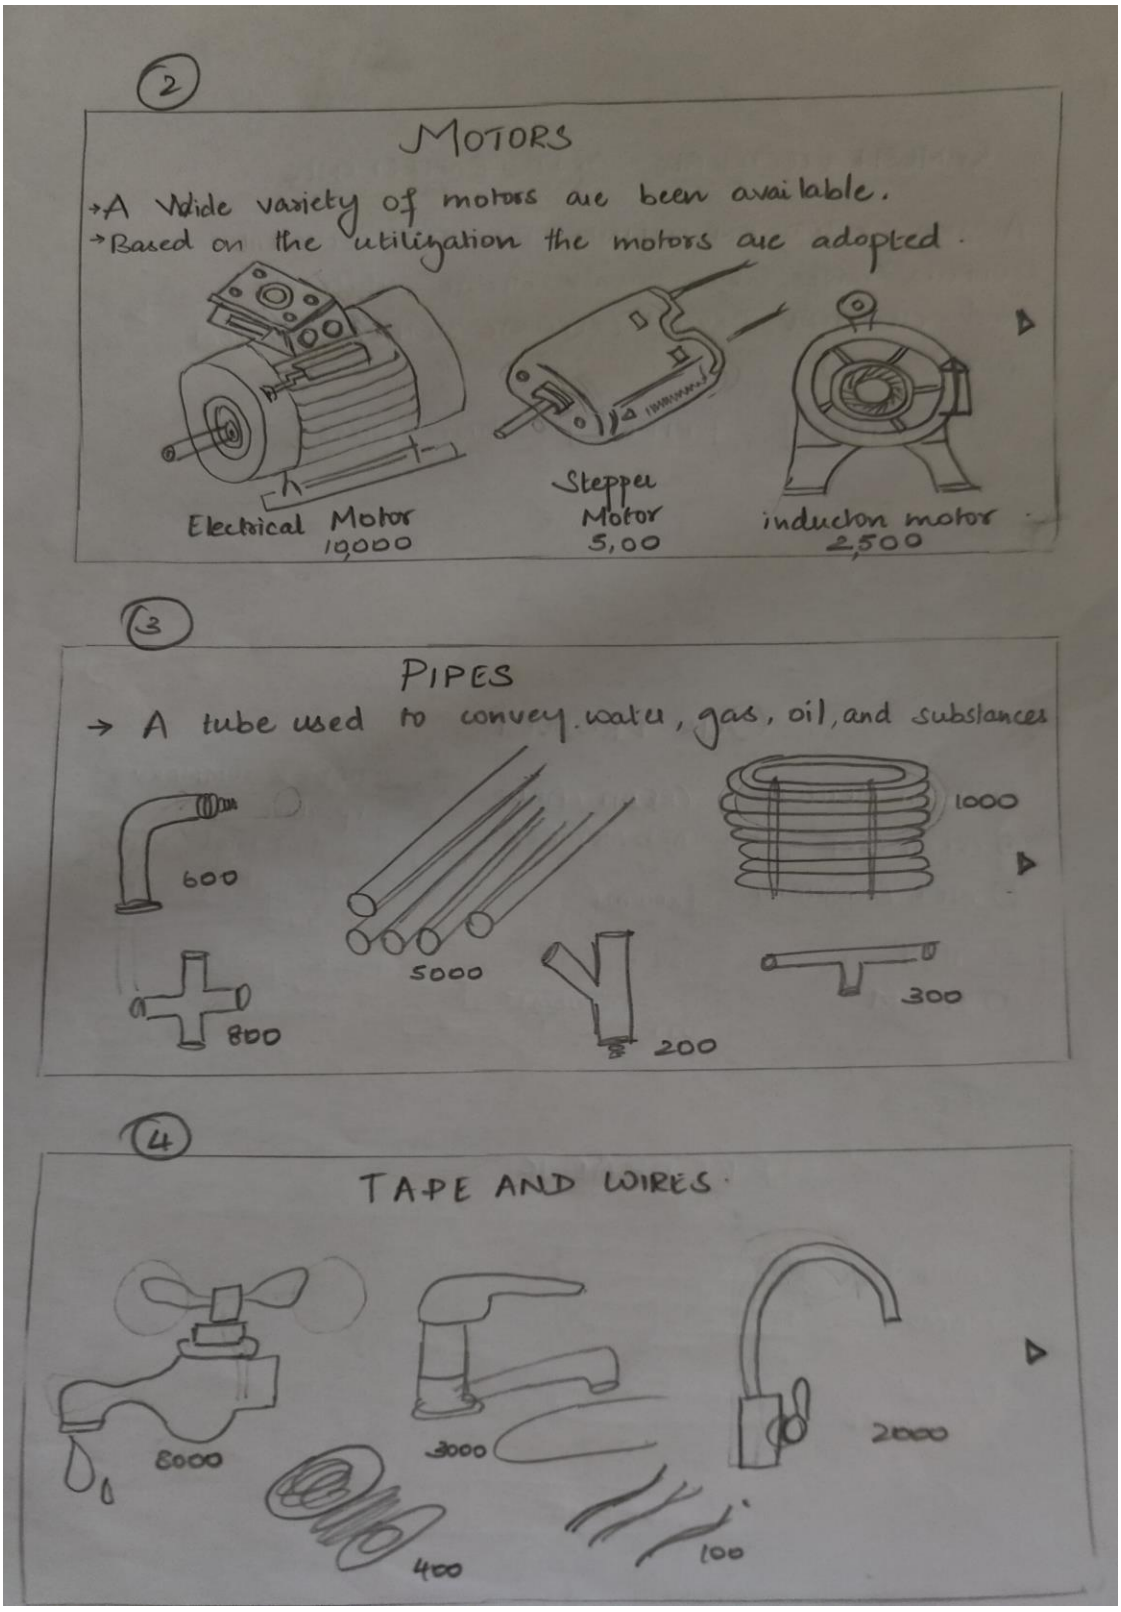
Storyboards are illustrations that represent a story, a scenario. Basically, it is a tool that consists of successive frames, in which illustrations are arranged to visualize the story. This method has evolved from the production of motion pictures in user experience design.

**Purpose:**

A storyboard is a planning document. It is created before the final product is developed and used to illustrate a story or show the changes of scene. In many cases this will be based on a timeline but could also be decided by the user's choices of selection or navigation

**Story board design :**





2
MOTORS
→A Wide variety of motors are been available.
→Based on the utilization the motors are adopted.
Electrical Motor
10,000
Stepper
Motor
5,00
induction motor
2,500
3
PIPES
→ A tube used to convey water, gas, oil, and substances
600
